

Indoor Media – Digital Pods with dual touch interactive Portals

DSi.Pod

Digital communication and Real Time Transport information delivery

Indoor Media – Digital Pods with dual touch interactive Portals

The DSi.Pod combines real time information with real user interaction and are a innovative addition to shopping centres, business parks, schools or any high footfall location.

As with all DSi solutions the DSi.Pod is an element of our digital signage network that combines the delivery of Real Time Information (RTPI), interactive Information and even revenue generating digital advertising.

Compared to traditional static signs, DSi can quickly and easily manage and distribute updated, customised and targeted content to both your own staff, visitors and the general public in a entertaining, informing and engaging way.

The DSi.Pod for Indoor applications comes complete with single or dual 46" – 65" high definition, high brightness LCD panels and dual 17" touch interactive Portals. The 46-65" panels are driven by our core DSi network and will deliver high quality live Real Time Information as well as high definition content, digital communications and of course public messaging and emergency alerts if the need should arise.

The 17" touch interactive portals are also driven by our core DSi network and these can be used by the anyone for multiple applications such as Wayfinding, local events, reviews, restaurant guides, tourist information or anything you choose to distribute throughout your DSi network.

With the addition of our DSi.Blue module people will be able to download content directly from the DSi.Pod on demand straight to their mobile phones such as maps, brochures, timetables and promotions.

DSi.Pod offers real time information, images, videos and interaction.

Indoor Media – Digital Pods with dual touch interactive Portals
